

Good day. I have a lucrative business opportunity that will be beneficial to us. But first, permit me to introduce myself. I am Teju Akinwumi Williams, the Managing Director of Mobile Telephone Network(MTN), in Nigeria. Telecommunication (telephone) is proficient and lucrative in Nigeria.

MTN is a private mobile telecommunication company from South Africa. Its Nigerian branch is headed by Ahmad Farroukh. View this site: <http://www.cellular-news.com/story/18358.php> We secured the license to commence operations in Nigeria during the term of former president Olusegun Obasanjo, and has remained a benchmark for telecommunication companies in Nigeria.

As a result of the economic melt down, which resulted in the decrease exportation of crude oil, the Federal Government of Nigeria, has seen the need to look into other sectors of the economy, in other to generate more revenue.

It has decided to privatize all government corporations that are not functioning or not meeting up with set standards of revenue generations. NITEL/MTEL, its telecommunication companies, are among the corporations that the Federal Government has decided to privatize, also view this site: <http://www.tradeinvestnigeria.com/news/962689.htm>. I have as well attached the publication of the Government intention to privatize these companies(NITEL/MTEL). kindly view the attachment for your careful and trusted perusal.

Consequently, TRANSCORP, has agreed with the Federal Government, to sale its (TRANSCORP) 51% interest to new investor(s), due to the inability of the company to manage the telecommunication companies.

Like I said, Telecommunication industry is one of the lucrative businesses in the world. Companies and investors are making billions of dollars from it. For instance MTN, has 20.76 million customers in Nigeria, and records profits between 16, 18, to 27 billion dollars annually.

The Federal Government has spent trillions of dollars on these companies, in other to make them blue chip telecommunication companies. Despite the billions of dollars allocated yearly for expansion and maintainence and all its efforts, MTEL, has between 3 to 4 million subscribers, while NITEL, which is the only land line in Nigeria, has from 8.02 to 10 million subscribers.

Nigeria and Africa in general is a virgin land when it comes to telecommunication. The population of Nigeria (citizens), is 140 million, while that of emigrants are 55.05 million.

It is the cheap cost and the high profits inherent in this business and insufficient funds, that has prompted me to contact you. I can only afford \$208,000,000.00 (USD). I want interested investor(s), company or companies, group(s) or individual(s), that will assist me financially, to meet up with the required fund (\$500,000,000.00).

We will come as consortium to bid for our interest to acquire the 51% interest. If we do, I am optimistic that we will succeed in our bid to acquire the interest, because the Federal Government is bent on resuscitating the companies, and once they know that I am part of a company or consortium that is interested, they would like to have me as part of the management in the companies based on the experience I have acquired over the years of my being the Managing Director of MTN-Nigeria.

I assure you that within a period of one year of the acquisition and management of the companies, profits running into billions of US dollars would be made.

Therefore, we should endeavor to invest, for the fact that we will also have 75% equity stake. That means we will run the the companies by ourselves, without the interference from any person(s).

Our short term goal will be to make sure that these companies(NITEL/MTEL), take over as the best telecommunication company in Africa . The materials and equipments are there to achieve this. Then our long term goal should be to stabilize our lead and expand our networks to other African countries.

This will be more easier for us,since we will have the support of the Federal Government of Nigeria, which gives these countries subventions. Only about 25% of countries in Africa have access to telephone. Therefore, the governments of these countries will be willing to accept our will. Our aim should be teledensity for all African countries. More importantly, we will have access to \$500,000,000.00, for the running of the companies.

However, there are conditions you must have to accept for us to proceed. They are as follows:

- (1) We will utilize every fund allocated to the company effectively.**
- (2) I will be the Managing Director, while you and any persons of your choice will be members of Board of Directors.**
- (3) That after five years of us being in charge, I will have the remaining interest percent(2%), to complete my interest to 21%.**
- (4) Also, that any profit(s) accrued to us would be disbursed according to the interest percentage. And finally,**
- (5) That on no account should I be demoted, except if I am found incompetent on my duties.**

If you are interested and ready to abide to these conditions, make sure you contact me through this email address:

interestedinvestors@rocketmail.com

with the following details:

- (A) Your full name**
- (B) Your company's name(if any)**
- (C) Your telephone number(s)**
- (D) Your country.**

I will give you more details, when you reply.

**Thanks.
Teju Akinwumi Williams.**
